ALFA clamps are characterized by the typical ITALIAN model that at the end is our ALFA model with the bended fixed bar all in one piece and the sliding hot forged bar with our screw clamping system.

The fixed bar is produced with a hot forged bending process that preserve the characteristics of the special steel itself used and the result is: more resistance, high flexibility, more strength and the performance of the product reach a very high level of quality like the other products at the top of the market.

The sliding bar instead is produced by a hot drop forging process with carbon steel and also in this case to focus to preserve the main characteristics of durability and strength of the raw material.

The screw and the swivel are realized in steel by automatic mechanical machines and assembled by some robot.

All the parts of the clamp are 100% made in Italy produced in our Italian production plant!

The product burn as a one dedicated to Joinery but nowadays thanks to all the characteristics we say before is considered by the market an UNIVERSAL model of clamp for several professional working sectors like BUILDING, CARPENETRY, WELDING, NAVY, INDUSTRY, and more; its quality/price ratio is a commercial key point of the product that put it to be consider by the market itself as a top product. ONE PRODUCT, SEVERAL PROFESSIONAL MARKET OF WORKING!
